WIRELESS DECENTRALIZED VENTILATION ?!

With inVENTer Connect, the ventilation systems no longer communicate with each other via cables, a radio connection ensures the exchange of data. This saves time, nerves and (kilo-)meter-long cables during installation. Phenomenal!

Brilliant! Finally, the ventilation can now also be controlled via the “inVENTer Mobile” mobile phone app. With the pre-installed ventilation profiles, this is easier than ever.

Even easier: with air quality sensors, the ventilation system automatically adapts to any situation.

Totally excellent!

Au revoir, cables! Fans communicate with each other and with the controller via radio.

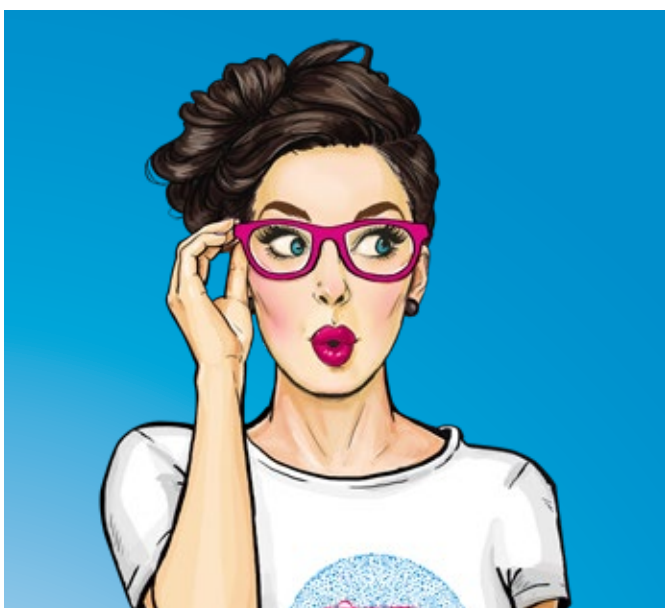

Greetings, mobility! Set a comfortable climate with the „inVENTer Mobile“ mobile phone app.

Good day, comfort! Preset ventilation profiles for fully automatic ventilation of individual rooms.

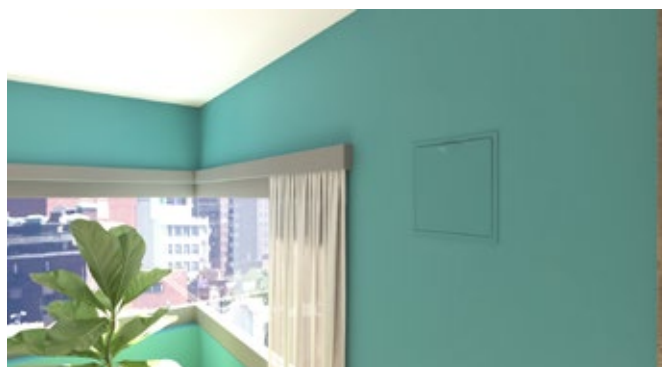

Hi, basement ventilation! Automatic dew point control thanks to an additional outdoor sensor.

AND THEY ARE EVEN INVISIBLE?!

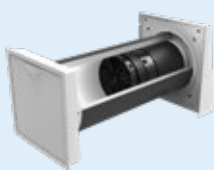

Where are the ventilation units in the room? One does not know! The Connect inner panel is flush with the wall and practically invisible. Simply gorgeous!

It's that easy:

①

Install the inVENTer ventilation system with Connect inner cover

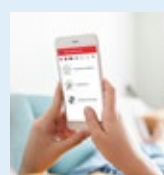

②

Connect the ventilation system to the Easy Connect controller

③

Control and monitor the ventilation with the “inVENTer Mobile” app
